Product Description

Burromax TTMax Supermoto Electric Mini Bike

The TTMAX offers up a midsized Burromax Mini Bike that has lots of performance and features you will enjoy that are on par with the larger TT1600R but in a smaller package. We started with a totally new heavy duty frame design using larger Axles, Brakes and forks than the TT750R and added in some TT1600 components to make a very durable chassis for larger riders. Stronger and with an extra padded seat this bike was made to accommodate riders up to 6'3" comfortably and can pull up to 350 lbs on pavement. We keep the bike weight down to 82 lbs and pack in a ton of performance with 4 selectable ride modes. Two ride modes are soft and easy to ride and two ride modes for guys who want power right now! With stock gearing, and a very powerful Brushless Motor, it comes in with a top speed of 34 Mph, quick acceleration and lots of hill climbing ability. We have a new 3 mode headlight feature of Hi, Lo and strobe as well as Halo side running lights or super bright LED sidelights for safety and campers. This is a great bike for people who started out on our smaller TT series bikes and want more power but like the small size for transporting and storage. This bike is about 3-4" longer and 3-4" taller than our TT350R/TT750R. We are sure you will be impressed with the quality and features. Fun for the whole family, this bike is made for an ADULT RIDER 16 and OVER with MOTORCYCLE SKILLS. This bike is intended for Off Road, Camping and Pit-bike environments.
